

HYDROBARRIER DRY MIX v1.0 – INSTRUCTION SHEET

What is HydroBarrier?

HydroBarrier is a dry fire-retardant mix designed to be activated with water. It creates a temporary protective foam or gel barrier for vegetation, structures, and surrounding property in high-risk fire zones.

Directions for Use:

Empty the full contents of the inner pouch into a clean 5-gallon bucket.

Add 2 to 3 liters of clean water while stirring gently (about 30 seconds).

A foam or gel will form depending on water volume and agitation.

Apply generously to surfaces using a brush, sprayer, or by hand.

Discard unused gel or foam after use.

Mixing Notes:

2L water = thicker gel

3L water = foamier mix

Warmer water may speed up mixing

Contents:

Sodium bicarbonate

Potassium bicarbonate

Monoammonium phosphate

Superabsorbent polymer

Cocamidopropyl betaine (powder)

Cornstarch

Caution:

Not for human or animal consumption.

Avoid contact with eyes. Rinse with water if contact occurs.

Keep out of reach of children.

Storage Tips:

Keep sealed in a dry container until ready to use

Store in a cool, dry place away from direct sunlight

Do not mix until immediately before use
